EDUCATION

B.Tech in Computer Science and Engineering – CGPA: 8/10 *2023 – 2027*
SRM Institute of Science and Technology
Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, DBMS, Computer Networks.

EXPERIENCE

AI/ML Intern *Nov 2025 – Dec 2025*
Fidore Health (fidorehealth)

- Engineered automated backend workflows integrating LLM-based agents with data extraction, cleansing, and transformation pipelines, ensuring reliable and accurate system responses at scale.

Gen AI Intern *May 2025 – Jul 2025*
AerixNova Technologies (aerixtech.com)

- Built and validated retrieval-augmented backend pipelines (RAG); applied statistical analysis and structured hypothesis testing to measure and improve system accuracy, strengthening debugging and root-cause analysis skills.

Undergraduate Researcher – Intelligent Mock Interview Platform Using LLMs *Nov 2025 – Present*
SRM Institute of Science and Technology

- Owned end-to-end development of an API-driven evaluation system, including automated data collection pipelines and performance dashboards for tracking system quality and reliability.

PROJECTS

Loan Approval Prediction *GitHub*

- Built a Machine Learning-based system to predict loan applicant eligibility using key financial and personal factors, aimed at supporting faster, data-driven credit approval decisions for banks.
- Performed data preprocessing, feature engineering, and model evaluation in Python to classify loan approval outcomes, applying the workflow to a real-world financial services use case.

Customer Churn Prediction using Machine Learning *GitHub*

- Performed exploratory data analysis, feature engineering, and hypothesis testing on customer datasets using Python (pandas, scikit-learn) to identify key churn drivers.
- Built and deployed a prediction model achieving 92% accuracy (Logistic Regression, Random Forest, XGBoost); integrated with SQL databases and built a RAG-based layer to surface actionable insights.

Skin Cancer Detection Using Vision Transformers (ViT)

- Developed a deep learning classification system using Vision Transformers, applying transfer learning on the HAM10000 dataset with data augmentation and preprocessing to improve generalization across diverse image classes.
- Evaluated model performance using precision, recall, and F1-score across multi-class skin lesion categories to validate robustness on imbalanced medical image data.

AI-Powered Mock Interview & Job Readiness System *GitHub*

- Designed and implemented an LLM/NLP-based system that generates role-specific questions, evaluates responses, and delivers structured, personalized feedback.
- Built a modular pipeline separating question generation, response evaluation, and feedback scoring for easier testing and maintainability.

TECHNICAL SKILLS

Programming Languages: Python, SQL, C, Java
Backend & APIs: FastAPI, Flask, REST API Design, Object-Oriented Design, Web Scraping
Databases: SQL, MongoDB (NoSQL), Query Optimization
AI & Machine Learning: Machine Learning, Deep Learning, CNNs, LLMs, RAG, NLP
Data Science & Analysis: EDA, Statistical Modeling, Hypothesis Testing, Feature Engineering
Data Visualization: Matplotlib, Seaborn, Plotly, Excel Dashboards
Frameworks & Libraries: PyTorch, TensorFlow, Scikit-learn, LangChain, Pandas
Developer Tools: Git, GitHub, VS Code, Google Colab, Jupyter Notebook, PyCharm

ACCOMPLISHMENTS

- Runner-Up, Wells Fargo Innovation Ideathon – Developed AURA: Autonomous Unified Robo Assistant (2025)
- Semi-Finalist, Walmart Sparkathon – Top 30 teams out of 2,000+ nationwide (2025)

CERTIFICATIONS

- MongoDB Associate Developer – MongoDB Inc. (Global Certification)
